Abstract

We present synthetic layout samples that exercise the conversion of figures and author blocks, a class of test documents inspired by considerations from typical conference papers. Our implementation is available at `https://example.org/toy/layout`

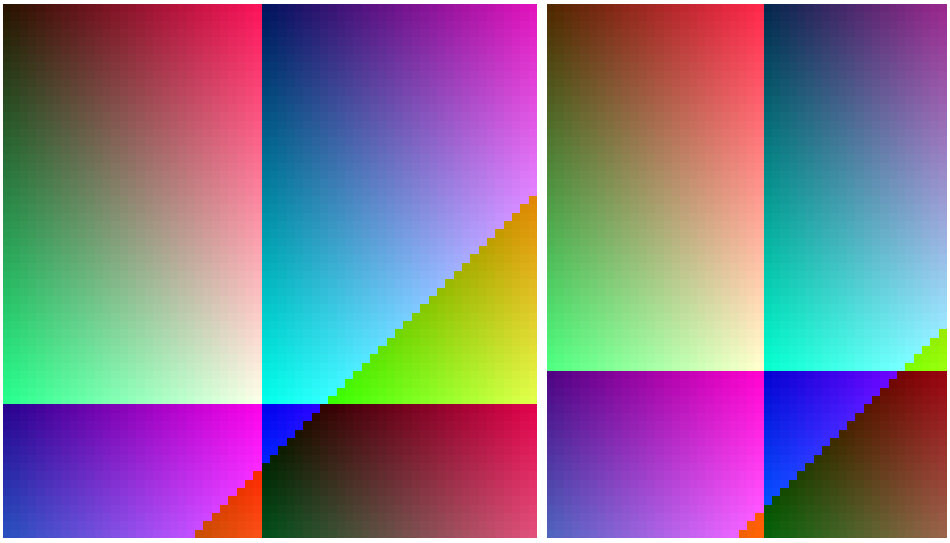

Figure 1: Generated samples (left) and a cropped sample grid (right).

This paragraph is ordinary body text in ten point Times so that the converter can determine the body size of the page. The figures below are drawn the way pdfTeX draws them for a conference paper.

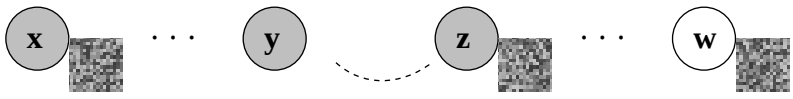

Figure 2: The directed graphical model considered in this test.

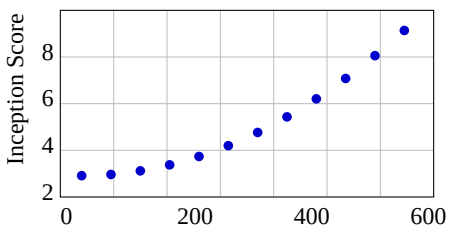

Figure 3: Sample quality over time.
