

Two Column Layout Test

A single-column abstract paragraph that spans the full width of the page before the two-column body begins. It should remain a full-width paragraph after conversion.

1. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

2. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

3. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter

detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

4. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

5. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

6. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

7. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.

8. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each

column separate, and preserves line breaks and paragraph spacing exactly.

9. SECTION HEADING

Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly. Justified body text in the column layout is used to check that the converter detects the gutter, keeps each column separate, and preserves line breaks and paragraph spacing exactly.
